Design

The term 'design' is an inseparable part of modern society. But we do not believe that innovation only means attaining the best possible shape. We procure materials with undisputable properties and we work with them daily throughout the design process.

Rubber for walls, tables, chairs or curtains. We can customise a perfectly com-

Rubber

Contec.proof waterproofing membranes are made from EPDM synthetic rubber – an originally non-elastic material. It goes through a vulcanisation process, i.e. with the aid of sulphur and heat it becomes an extremely tear-resistant and weather-resistant construction material.

Using this flexible material, we want to break new ground with conviction. Making the impossible possible.

Kautchic bags

Tailor made for individualists, produced in Valais.

Facades and wall claddings

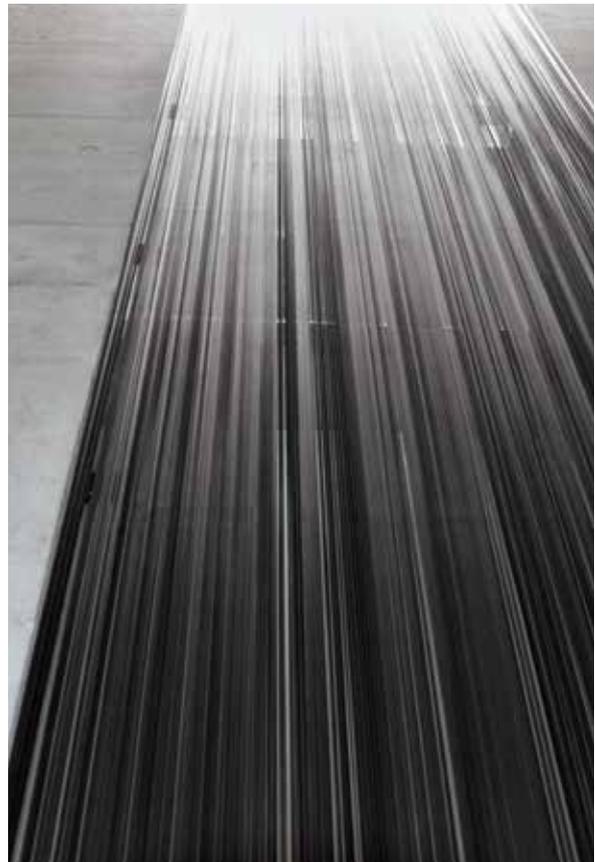

The facades and wall panels can be used both indoors and outdoors, and can be prepared to your liking in various shapes and sizes.

Furniture

Various shapes of tables and chairs are upholstered in our rubber covers. The customer is free to choose the size, shape and style.

It does not stop there, we also create extravagant curtains out of rubber to suit our customer's wishes. The possibilities are endless.
