Bodies of water

CONTEC.proof is the ideal sealing material for all artificial ornamental and commercial water systems. Whether it is in private gardens, public parks, golf courses, for water sports facilities, as reservoirs or wetlands.

Tried and tested material

Rubber seals are not a new concept, but they keep like new. With over 40 years of reference examples from flat roof constructions, the seal is still working perfectly. Contec EPDM rubber does not contain any herbicides, pesticides or solvents. The safest and most natural solution for humans, animals and plants.

Modern prefabrication

Measuring, creating a CAD plan, welding plans together, delivering. Contec pond seals are accurately prefabricated at the factory and on your site within two days of ordering. Due to their molecular connection, the seams are absolu-

tely tear-resistant and impervious root damage. And: you only pay for as much material as you really need, because the prefabrication ensures there is no superfluous waste.

Quickly installed, versatile applications

After the precise prefabrication, the equally precise logistics come into play. The rolled-up seal (up to 2000 m² in one piece) is supplied with a layout plan and positioned on site on the X point. Roll out, adjust, done. Your pond is sealed in record time. Freezing temperatures are not an obstacle - rubber keeps its natural elasticity reserves even at 40°C.

Swimming ponds

Inspired by nature: Almost like a mountain lake.

contec

Biotopes

Inspired by nature: Even complex shapes can be sealed in record time thanks to the customised prefabrication.

Golf lakes

An attraction and a challenge: Three lakes with a total area of 200 m² harmoniously blend into the Alpine golf landscape of Interlaken.

Retention basins

Waste incineration plant in Thun: The retention basin was sealed within three days after receiving the order.

Reservoirs

Snow-sure since 2000: The ski area of Tschierg feeds its snow-making facilities from the 2700 m² large pools on the Ofen pass.

Renaturation pools

A Pro Natura project: A new habitat for the endangered tree frog.

Meteor basins

Rain water tank to irrigate a vegetable plantation.

Why Contec?

- Comprehensive advice about seals for water bodies
- Training on how to install
- Quality assurance
- Support during implementation
