

Contec.greenlight

The advantages of the unique EnergyGreenRoof system from Contec:

- Lightweight construction (substructure: 6 kg/m² , without PV modules)
- More performance, no additional costs compared with deep elevation systems
- No yield loss due to shading of the plants. Module height lower edge min. 30 cm from substrate
- Increased yield thanks to cooler roof climate
- Snow slides off quickly
- Easy care, control and cleaning thanks to raised installation
- Ecological added value of the flat roof thanks to combination of photovoltaics and greening
- Higher biodiversity
- Water retention thanks to green roof
- Integrated water storage in the elevation
- Problem-free integration of fall protection
- Quick installation
